Abenaki Council of Wolinak

This is to confirm that iTech Labs has examined the casino game logs in the gaming system of **Abenaki Council of Wolinak** for the quarter ending March 2022 as recorded by the respective game servers. iTech Labs has calculated the Return To Player (RTP) for all the games using the data from the game logs. The table below lists the actual calculated RTPs for real money games played.

Abenaki Council of Wolinak game servers service the following internet gaming sites:
www.canplaycasino.com, www.vipcasinocom.com

Game Type Description	RTP
Blackjack	98.23%
Baccarat	97.96%
VideoPoker	97.80%
Roulette	97.69%
Slots	94.95%
Other games combined*	95.87%
All games combined	95.40%

* Other games combined - includes Craps.

There were a large enough number of game records to give the RTP calculations sufficient statistical power¹. The actual RTPs shown above are percentages of total actual winnings to bets for each game type. iTech Labs has done checks to verify the integrity of the game logs. iTech Labs also maintains a copy of the game logs for verification purposes.

iTech Labs certifies that the RTPs were calculated correctly from the game logs based on the actual bets and winnings and that the actual RTPs are greater than normally required by international gaming jurisdictions.

¹The games included in the Other games combined category have insufficient data for the audit period.

¹Roulette RTP is 100.01%. this is within a 95% confidence interval and no fault indicated.

If all bets were the same size, Roulette is above the 95% confidence interval for this period.

But if one third of the bets were of higher value than the others (more statistically significant), the result falls within 95% confidence.

Note that one month's results are closer to the tRTP than others.

Given that there is usually a mix of bet values this game is probably working within statistical expectations.

¹Roulette RTP is 105.15%. This game RTP was also slightly high last period. We therefore looked at monthly fluctuations to check for consistent error, or random fluctuation. Monthly results are both above and below the expected RTP. Most results are within 99% confidence each month, and all are within 99.9% confidence limits. We therefore find no fault in the game as reported.
