The RNG uses a well-known algorithm to generate random numbers. The numbers generated by this RNG have passed Marsaglia's "diehard" tests for statistical randomness.

iTech Labs has also evaluated card shuffling for single deck with one joker and double deck with one joker per deck.

The shuffling tests were conducted on large enough samples to give the calculations sufficient statistical power.

iTech Labs has found that card sequences are unpredictable, non-repeatable and uniformly distributed.

The certified code for the RNG has been fingerprinted.
